

Novisto Integrates SASB Standards into Data Platform

Novisto is now an official data licensee of the Sustainability Accounting Standards Board ([SASB](#)) with a license to the organization's materiality framework and resources. As a result, Novisto's platform will help issuers improve their reporting by implementing SASB's industry-specific sustainability disclosure standards.

SASB's mission is to help businesses around the world identify, manage and report on the sustainability topics that matter most to their investors. [Licensing SASB's materiality framework](#) helps organizations develop a robust and standardized data architecture based on a transparent,

market-informed determination of materiality, while still allowing for customization to fit each organization's needs.

"Novisto provides a unique solution for end-to-end corporate sustainability management, including investor-facing disclosure," says Édouard Clement, Chief Product Officer and Co-Founder of Novisto. "We look forward to helping our customers understand and integrate SASB's Standards into their overall ESG strategy, management, and reporting practices, and to advancing the standards' adoption in the marketplace."

"We are glad to welcome Novisto as a SASB licensee. By integrating SASB's materiality framework and resources into its platform, Novisto can offer a lens of the industry-specific ESG topics most likely to impact enterprise value with their unique solution," says Nicolai Lundy, SASB's Director of Partnerships & Market Outreach.

In addition to SASB, **Novisto's platform** supports all major ESG and sustainability reporting standards and frameworks, including the Global Reporting Initiative (GRI), the Task Force on Climate-related Financial Disclosures (TCFD), the CDP, and the UN Global Compact (UNGC).

ABOUT NOVISTO
